

**AMENDMENT TO THE CLAIMS**

The following is a detailed listing of all claims that are, or were, in the Application.

1-24. (Canceled)

25. (Previously presented) A method performed on a computer for sharing an application using screen sampling, the method comprising:

receiving from a presenter a selection of a shared application;

monitoring function calls made by the shared application to dynamically determine a position and a size of a non-DirectDraw region of a window for the shared application;

monitoring a DirectDraw COM interface to dynamically determine a position and a size of an DirectDraw region of a window for the shared application;

monitoring function calls made by a non-shared application to dynamically determine a position and a size of a window for the non-shared application;

comparing the positions and the sizes of the non-DirectDraw region and the DirectDraw region of the window for the shared application against the position and the size of the window for the non-shared application to determine any overlapping regions;

capturing a screen shot of an image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application; and

transmitting the screen shot of the image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application and information for the overlapping regions to a viewer.

26. (Previously presented) The method of Claim 25 further wherein:

the transmitted screen shot of the image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application and information for the overlapping regions can be used to display the image to the viewer with the overlapping regions filled in with an arbitrary color.

27. (Previously presented) The method of Claim 25 further comprising:

compressing the screen shot of the image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application.

28. (Previously presented) The method of Claim 25 further comprising:

capturing a screen shot of an updated image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application;  
transmitting the screen shot of the updated image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application to a viewer.

29. (Previously presented) The method of Claim 25 further comprising:

periodically capturing the image corresponding to the shared application window.

30. (Previously presented) The method of Claim 25 further comprising:

determining whether the position or the size of any of the non-DirectDraw region of a window for the shared application, the DirectDraw region of the window for the shared application, and the window for the non-shared application has changed; and

transmitting information about the change in the position or the size to a viewer.

31. (Previously presented) A computer-readable storage medium storing a computer program executable by a computer, the computer program comprising computer instructions for:

receiving from a presenter a selection of a shared application;

monitoring function calls made by the shared application to dynamically determine a position and a size of a non-DirectDraw region of a window for the shared application;

monitoring a DirectDraw COM interface to dynamically determine a position and a size of an DirectDraw region of a window for the shared application;

monitoring function calls made by a non-shared application to dynamically determine a position and a size of a window for the non-shared application;

comparing the positions and the sizes of the non-DirectDraw region and the DirectDraw region of the window for the shared application against the position and the size of the window for the non-shared application to determine any overlapping regions;

capturing a screen shot of an image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application; and

transmitting the screen shot of the image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application and information for the overlapping regions to a viewer.

32. (Previously presented) The computer readable storage medium of Claim 31 wherein:

the transmitted screen shot of the image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application and information for the overlapping regions can be used to display the image to the viewer with the overlapping regions filled in with an arbitrary color.

33. (Previously presented) The computer readable storage medium of Claim 31 further comprising computer instructions for:

compressing the screen shot of the image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application.

34. (Previously presented) The computer readable storage medium of Claim 31 further comprising computer instructions for:

capturing a screen shot of an updated image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application; transmitting the screen shot of the updated image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application to a viewer.

35. (Previously presented) The computer readable storage medium of Claim 31 further comprising computer instructions for:

periodically capturing the image corresponding to the shared application window.

36. (Previously presented) The computer readable storage medium of Claim 31 further comprising computer instructions for:

determining whether the position or the size of any of the non-DirectDraw region of a window for the shared application, the DirectDraw region of the window for the shared application, and the window for the non-shared application has changed; and transmitting information about the change in the position or the size to a viewer.

37. (Previously presented) A data conferencing system comprising:

a presenter computer connected to one or more server computers via a global area network;

a viewer computer connected to the one or more server computers via the global area computer network; and

a computer program executable by the presenter computer, wherein the computer program comprises computer instructions for:

receiving from a presenter a selection of a shared application;

monitoring function calls made by the shared application to dynamically determine a position and a size of a non-DirectDraw region of a window for the shared application;

monitoring a DirectDraw COM interface to dynamically determine a position and a size of an DirectDraw region of a window for the shared application;

monitoring function calls made by a non-shared application to dynamically determine a position and a size of a window for the non-shared application;

comparing the positions and the sizes of the non-DirectDraw region and the DirectDraw region of the window for the shared application against the position and the size of the window for the non-shared application to determine any overlapping regions;

capturing a screen shot of an image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application; and

transmitting the screen shot of the image corresponding to the non-DirectDraw and the DirectDraw regions of the window for the shared application and information for the overlapping regions to the viewer computer.
